

Make a an application on banking domain for the following requirements

1. Create Ann Account class with accNo, custName, balance

1.1 Create a default constructor and initialise values for accNo,custName and balance

2. Create a method in Account class public void withDraw(double amount)

3. If amount passed in

above method is greater than the balance of account, then

—> create a Checked exception class

InsufficientFundsException

—> create a parameterised constructor and pass on exception message to super class of Exception class

—> then handle this exception in Account class if condition is satisfied

4. If amount is less than or equals to balance, then

update the balance and
display amount withdrawn
